SUMMARY

As an Associate Software Engineer at Accenture, I leveraged my expertise in Java, React Js, and Spring Boot. My strong problem-solving abilities and collaborative skills led to innovative solutions, making me a pivotal team member. Proficient in MERN stack, I excel in fast-paced environments, driving efficiency and excellence.

EXPERIENCE

Associate Software Engineer, Accenture **July 2024-Current**

- Developed and maintained RESTful APIs using Spring Boot for a high-impact client project in the retail domain, ensuring seamless backend integration and performance optimization.
- Collaborated closely with frontend teams to integrate APIs, resulting in a 20% improvement in page load times and enhanced user experience across critical modules.
- Rapidly acquired product-specific knowledge and essential skills to become proficient at problem-solving.
- Contributed meaningfully to team meetings, gaining valuable insights into organization culture and workflow dynamics.

EDUCATION

Bachelor of Technology |Computer Science| Siksha O Anusandhan University |8.70 CGPA **2020-2024**

ACADEMIC PROJECTS

Twitter Sentiment Analysis on Impact of COVID-19 on Education (Under Dr. Rasmita Rautray)

- Conducted sentiment analysis on 110K+ tweets using Python and TextBlob to assess the impact of COVID-19 on education; implemented TF-IDF vectorization (unigram & bigram) for effective feature extraction.
- Trained and evaluated four ML models (Naïve Bayes, Random Forest, Logistic Regression, SVC) using an 80/20 train-test split and 10-fold Stratified Cross-Validation; achieved 92% accuracy with SVC.
- Performed thorough preprocessing, cleaning, and labeling of tweet data; leveraged Snscrape for data collection and optimized model accuracy with GridSearchCV-based hyperparameter tuning.
- Built and stored sentiment prediction pipeline using pickled vectorizer and trained model; visualized sentiment trends and proposed education policy insights based on classified tweet polarity.

Three-Tier Full Stack Banking Web App using JAVA Spring Boot

- Developed a full-stack Banking Web Application using Spring Boot, Thymeleaf, and MySQL with core functionalities including deposit, withdrawal, and fund transfers.
- Implemented a 3-tier architecture (Controller-Service-Repository) with secure user authentication and role-based access control using Spring Security.
- Designed RESTful endpoints and integrated dynamic web pages using Thymeleaf templates for real-time transaction updates and account management.

AI-Powered Personal Health Assistant | Python, Flask API, LLM (OpenAI GPT), React, Postgres, Render

- Developed an AI-driven personal health assistant using LLMs (OpenAI GPT) to analyze user symptoms and provide safe, informational guidance with disclaimers.
- Built a Flask REST API backend with a React chatbot UI, enabling real-time, conversational health interactions.
- Implemented session history tracking and personalized reminders with PostgreSQL to enhance user experience.
- Applied prompt engineering for structured, user-friendly responses and deployed on Render, achieving 85%+ positive feedback in testing.

TECHNICAL SKILLS

Programming Languages : Java, HTML, CSS, JavaScript, Python
Database Management : MySQL, SQL, MongoDB(NoSQL), PostgreSQL
Automation Testing : JUnit, Agile Methodologies
Frameworks : Spring, Spring Boot, ReactJs, MERN Stack, NodeJs, JSON, Angular
Tools : VS Code, Eclipse, Postman, Jira, Intellij, Maven, Gradle, Git, Git Bash, Linux, Winsurf, Claude, ChatGPT, Microsoft Copilot, Splunk
Web Services : REST Api, Microservices, HTTP/S,
Cloud : AWS
Core Concepts : Data Structures and Algorithms, Object Oriented Programming (OOPS),System Designing

CO CURRICULAR ACTIVITIES AND ACHIEVEMENTS

- Solved 250+ problems in GeeksForGeeks and Leetcode.
- Participated in Hacker War 3.0 (Hackathon) in SOA University.
- Participated in Google Code Jam I/O for women 2022 (264th rank).
