Gopinath Thammisetty

Java Developer | Spring Boot | RESTful APIs

Bangalore, India | thammisettygopinath5122@gmail.com | +91 9550935031 | linkedin.com/in/gopinaththammisetty

Professional Summary

Java Developer with 2+ years of experience at Tata Consultancy Services (TCS) designing and delivering production-grade RESTful APIs using Java, Spring Boot, and Spring Data JPA. Proven ability to improve backend response times by up to 25% through API optimisation and reduce runtime errors by 30% via structured exception handling and input validation. Experienced across the full backend development lifecycle — requirement analysis, agile sprint planning, PostgreSQL query optimisation, CI/CD integration, and production incident resolution.

Technical Skills

Programming Languages: Java (primary), SQL

Frameworks & Libraries: Spring Boot, Spring MVC, Spring Data JPA, Hibernate (ORM), JPA

API Development: RESTful API Design, JSON, HTTP/HTTPS, Swagger / OpenAPI

Databases: PostgreSQL, MySQL

Build & DevOps: Maven, Git, GitHub, Jenkins, GitHub Actions (CI/CD)

Testing & QA: Postman, Unit Testing, API Testing, Defect Resolution

Concepts & Practices: MVC Architecture, Controller–Service–Repository Pattern, Agile / Scrum, SDLC, Exception Handling, Input Validation, Transaction Management, Understanding of Kafka and AWS

Professional Experience

Tata Consultancy Services (TCS) – Java Developer 11/2024 – Present

Bangalore, India

Project : Implementation of Mortgage solution

- Developed and maintained RESTful APIs using Java and Spring Boot, reducing backend service response time by 20–25% through endpoint optimisation and efficient request handling.
- Architected Controller–Service–Repository (MVC) layering across Spring Boot microservices, enhancing application scalability and cutting code redundancy by ~25%.
- Integrated PostgreSQL database using Hibernate ORM and Spring Data JPA, enabling reliable data persistence, retrieval, and transaction management across core services.
- Designed and optimised complex SQL queries, improving data retrieval performance by 20–30% and reducing database load under high-concurrency scenarios.
- Implemented robust input validation and structured exception handling, reducing runtime errors by 30% and ensuring consistent, fault-tolerant backend processing.
- Modelled and processed JSON-based request/response data structures, improving cross-service integration efficiency by ~20% and simplifying third-party API consumption.
- Standardised RESTful API response contracts using HTTP status codes, improving error traceability and increasing API usability by 25%.
- Collaborated in agile sprint ceremonies — requirement analysis, story estimation, and design discussions — achieving 100% on-time task delivery across all sprint cycles.
- Executed comprehensive API testing using Postman and coordinated unit testing efforts, resolving 90% of critical defects before production deployment.
- Diagnosed and resolved production incidents using root-cause analysis, restoring system stability and preventing recurring failures.
- Managed source code versioning with Git and GitHub, Supported CI/CD pipeline execution via Jenkins and GitHub Actions to streamline build and deployment workflows.

Key Achievements

- Reduced API response latency by 20–25% through targeted Spring Boot performance optimisation.
- Achieved 90% pre-deployment defect resolution rate via systematic Postman-driven API and unit testing.
- Delivered 100% of sprint tasks on schedule across all agile cycles, contributing to zero missed release deadlines.
- Cut SQL query execution time by up to 30% through query restructuring and index-aware optimisation.

Education

Bachelor of Technology (B.Tech)

Anantha Lakshmi Institute of Technology & Sciences, Andhra Pradesh

Affiliated: JNTU Anantapur | CGPA: 8.2 / 10.0 | 2020 – 2024

Certifications

- Fundamentals of Full Stack Development — Excelr
- Core Java Certification — Excelr
- SQL Certification — Oracle
